PH.340 (EPIDEMIOLOGY)

PH.340.600. Stata Programming. 2 Credits.
Teaches Stata programming in a systematic way to students who have had exposure to Stata or another statistical package, but may not have the tools to perform complex analytical projects independently. Covers data management, programming concepts, procedural programming, Stata-specific commands and constructs, and project workflow. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.601. Principles of Epidemiology. 5 Credits.
Introduces principles and methods of epidemiologic investigation of infectious and noninfectious diseases. Illustrates methods by which studies of the distribution and dynamic behavior of disease in a population can contribute to an understanding of etiologic factors, modes of transmission, and pathogenesis. Presents different types of study design, including randomized trials, case-control and cohort studies, risk estimation, and causal inferences. Demonstrates the relationship between epidemiology and the development of policy. Laboratory problems provide experience in epidemiologic methods and inferences, illustrating a common-vehicle epidemic; the spread of infectious disease in school, home, and community; epidemiological aspects of a noninfectious disease; vaccination, the epidemiological approach to health services evaluation; rates of morbidity and mortality; sensitivity and specificity; and life table methods. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.602. Intermediate Epidemiology. 3 Credits.
Covers key principles, designs and methods of observational epidemiology studies. Includes a description of general designs of the main observational studies (birth cohort analysis, ecologic studies, cohort, case-based case-control studies, case-control studies within a defined cohort, and case-crossover studies), measures of disease frequency (cumulative incidence, rate and odds) and of association (relative risk, odds ratio), evaluation of confounding and interaction, types of bias, and the most often used methods of adjustment for confounding effects and their assumptions. Employs lectures and group discussions of exercise Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.604. Introduction to -Oms in Public Health. 2 Credits.
Introduces quantitative scientists to how "omics" can address public health questions. Reviews basic biology concepts for -omics with a focus on genomics, epigenomics, transcriptomics, and metabolomics. Presents commonly used -omic measurement methods and data preprocessing tools. Discusses challenges that may arise in data analysis due to data measurement issues as well as interpretation of results. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.605. Applications of the Case Control Method. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.606. Methods for Conducting Systematic Reviews and Meta-Analyses. 4 Credits.
Presents basic methods in the qualitative and quantitative meta-analysis, including formulating a hypothesis that can be addressed via meta-analysis, methods for searching the literature, abstracting information, and synthesizing the evidence. Quantitative methods include Bayesian and likelihood approaches to meta-analysis. Emphasizes essential steps of conducting systematic reviews through hands-on exercises. Focuses on analytical skills in performing meta-analyses and network meta-analyses. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.607. Introduction to Cardiovascular Disease Epidemiology. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.609. Concepts and Methods in Infectious Disease Epidemiology. 3 Credits.
Develops deeper understanding of the concepts and quantitative methods unique to infectious disease epidemiology, building upon the concepts and methods of general epidemiology and knowledge of specific infectious diseases. Topics include disease emergence, transmissibility and the basic reproductive number, transmission patterns and serial intervals, seasonality, virulence, the impact of heterogeneity host and pathogens on transmission, herd immunity, co-infections and phylodynamics. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.610. The One Health Approach to Epidemiology and Global Public Health: Problem Solving Seminar. 3 Credits.
Introduces students to the One Health approach to public health research and practice, providing examples of how evidence shapes public health policy and health promotion, from the local to the global scale. Students will practice strategic thinking and decision making in translating evidence to behavior and policy and will have the opportunity to interact with guest speakers working in One Health fields. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.612. Epidemiologic Basis for Tuberculosis Control. 2 Credits.
Considers subjects and epidemiologic principles relevant to control measures against tuberculosis. Includes the following topics: source and interpretation of tuberculin sensitivity; risk factors; prevention by case-finding and treatment, vaccination, and chemoprophylaxis; and elements of control programs in developed and undeveloped areas. Offers lectures, group projects and review of the tuberculosis literature as the primary components. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.613. Design and Conduct of Clinical Trials. 2 Credits.
Introduces clinical trial design in the context of epidemiological concepts, covers various topics in the design and conduct of clinical trials, and profiles clinical trials that illustrate these issues. Topics include the definition and history of clinical trials; trial designs, including phase III-IV, cross-over, factorial, and large, simple designs; internal and external validity; controls, randomization, and masking; ethical issues; introductions to data collection and management and analysis principles; monitoring of trials for safety and efficacy; and use of clinical trial data in healthcare decision-making. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).
PH.340.614. Conducting Epidemiologic Research. 2 Credits.
Covers applications of epidemiologic principles in the conduct of
observational studies as taught in advanced epidemiologic methods.
Focuses on developing skills to conduct and manage a research protocol,
monitor data collection, manage data and disseminate results. Covers
components of a clinical research team, responsibilities, expertise and
tasks study members perform, and organizational, logistical and
attitudinal issues that need to be addressed in producing an
effective research group. Topics include infrastructure needed for
single-site and multi-site studies, selection bias and analytical intent
in the determination of populations and methods for recruitment,
development of a manual of operations and forms for data collection and
administration, data management tools, implementation and review of
quality assurance, specimen repository tracking, and useful statistics for
evaluating the progress of the study.
Course location and modality is found on the JHSPH website (https://
www.jhsph.edu/courses/).

PH.340.615. Understanding the Relevance of New Analytical Methods to
Epidemiological Research. 2 Credits.
Provides a basis for understanding how new analytic methods are
relevant to epidemiologic research. Explores methods in "plain English"
in order to focus on utility of the methods as well as how to interpret
analyses as they are applied to research. Addresses the assumption of
the methods and big picture pros and cons.
Course location and modality is found on the JHSPH website (https://
www.jhsph.edu/courses/).

PH.340.616. Epidemiology of Aging. 3 Credits.
Course location and modality is found on the JHSPH website (https://
www.jhsph.edu/courses/).

PH.340.617. Pharmacoepidemiology. 2 Credits.
Course location and modality is found on the JHSPH website (https://
www.jhsph.edu/courses/).

PH.340.618. Epidemiology: the Basics. 3 Credits.
Introduces the population science of epidemiology, including methods
and approaches to measurement and outcomes, study design and
inference, risk estimation, and surveillance. Provides the essential
elements of epidemiology as appropriate for public health scientists.
Course location and modality is found on the JHSPH website (https://
www.jhsph.edu/courses/).

PH.340.619. Topics in Pharmacoepidemiology. 2 Credits.
Introduces the key elements of pharmacoepidemiology. Explores the
utilization and effects of drugs in large numbers of people and the
application of epidemiological methods to pharmacological issues.
Focuses on questions of drug safety and effectiveness, concentrating on
clinical patient outcomes and on evaluating the use of therapies. Applies the
research methods of clinical epidemiology (e.g., randomized trials,
cohort studies, case-control studies, use of secondary data, attention to
biases and confounding, effects of non-adherence, active and passive
surveillance for adverse events) to study medication exposures and
outcomes.
Course location and modality is found on the JHSPH website (https://
www.jhsph.edu/courses/).

PH.340.620. Principles of Clinical Epidemiology. 2 Credits.
Presents lectures and interactive sessions designed to expose students
to basic principles of clinical epidemiology and introduce key methods
utilized in clinical outcomes research. Focuses on principles and
methods in clinical epidemiology which would be most utilized by
clinicians/clinician researchers for screening and diagnosis of illness as
well as for prognostication and decision-making. Introduces methods
and issues in studying clinical epidemiology in health care settings (e.g.
administrative data).
Course location and modality is found on the JHSPH website (https://
www.jhsph.edu/courses/).

PH.340.623. Cancer Epidemiology, Prevention, and Control. 2 Credits.
Emphasizes the role of epidemiology in cancer prevention and control.
Compares and contrasts the descriptive epidemiology, natural history,
and pathologic and biologic characteristics of selected common
cancers, as well as factors related to their etiology. Discusses the
influence of environmental and genetic factors and their interplay on the
development of cancer together with the epidemiologic issues involved
in their investigation. Provides overview of problems involved in cancer
prevention and screening.
Course location and modality is found on the JHSPH website (https://
www.jhsph.edu/courses/).

PH.340.624. Etiology, Prevention, and Control of Cancer. 4 Credits.
Course location and modality is found on the JHSPH website (https://
www.jhsph.edu/courses/).

PH.340.627. Epidemiology of Infectious Diseases. 4 Credits.
Course location and modality is found on the JHSPH website (https://
www.jhsph.edu/courses/).

PH.340.628. Social Epidemiology. 2 Credits.
Course location and modality is found on the JHSPH website (https://
www.jhsph.edu/courses/).

PH.340.629. The Epidemiology of LGBTQ Health. 3 Credits.
Introduces constructs of sexual orientation and gender identity in the
context of public health. Explores historical, epidemiological, and social
perspectives related to the physical and mental health of lesbian, gay,
bisexual, transgender and queer (LGBTQ) individuals and communities.
Orients students to current and historic epidemiological and contextual
issues that shape what is known about LGBTQ health, presents an
overview of LGBTQ health disparities and interventions, and develops
a foundation for critical thinking about LGBTQ health research and
intervention potential.
Course location and modality is found on the JHSPH website (https://
www.jhsph.edu/courses/).

PH.340.630. Topics in Social Epidemiology. 2 Credits.
Provides a systematic and selective overview of conceptual approaches
and research findings related to the impact of social context and social
phenomena on health. Sessions highlight a different area of frontier
social epidemiology research. Social processes examined include 1) social
inequalities (including social class differences as well as the
effects of income inequality), 2) social networks, 3) neighborhood
and urban characteristics, 4) gender inequalities and 5) macro-social
changes. Discusses global health approaches to social determinants of
health including research experiences from different parts of the
world. Includes discussion of methods related to the study of social
epidemiology; however, this is not intended to be a methods course.
Includes limited lecture matter and thorough group discussions on
selected classic papers and latest readings.
Course location and modality is found on the JHSPH website (https://
www.jhsph.edu/courses/).
PH.340.633. Data Management in Clinical Trials. 3 Credits.
Acquaints students with important principles of the acquisition, management, and distribution of data in the clinical research environment. Topics focus on real-world needs of investigators and emphasizes those issues that researchers need to understand to work effectively with other members of study teams, including coordinators, data entry staff, programmers, and data managers. Does not focus on any particular type or size of study but covers topics that apply to many studies, and discusses approaches ranging from small single-investigator trials using only a spreadsheet through international networks using sophisticated web-based data management systems. Discussions often stress the benefits and costs of alternatives rather than recommending particular courses of actions. Does not focus on computer programming, although it combines practical and hands-on exercises with advanced treatment of important concepts.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.635. Clinical Trials: Issues and Controversies. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.636. Epidemiology in Evidence-Based Policy. 2 Credits.
Focus on how scientific evidence in general and epidemiologic studies in particular are used to inform health and regulatory policies. Reviews the role of scientists and epidemiologists in translating evidence to practice and policy; examines how science fares in the legislative, regulatory, and judicial settings; addresses methodological issues related to types and availability of evidence to guide policy. Topics include nutrition recommendations (e.g. population-wide sodium intake), environmental policies; opioid epidemic (e.g. safe injection sites); tobacco control and e-cigarettes; health disparity (e.g., racial disparities in kidney transplantation); diabetes prevention; legal and policy implications of class action lawsuits (e.g., gun policy and local food policy); COVID-19 (e.g., evidence-informed policy making during a pandemic); and modelling to guide policy. Guest faculty, experts in their field, present examples, discuss their experiences using evidence to guide policy.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.640. Eye Disease: Epidemiology and Control. 1 Credit.
Lectures and group discussions present the pathology, clinical manifestations, epidemiology, treatment, and control of the major blinding diseases, including diabetic retinopathy, cataract, glaucoma, trachoma, and age-related macular degeneration, as well as refractive error and ocular complications of Ebola and Zika.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.641. Healthcare Epidemiology. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.644. Epidemiology of Diabetes and Obesity. 2 Credits.
Describes the epidemiology and prevention of diabetes, obesity, and associated complications. Discusses methodological issues associated with evaluating these in epidemiologic studies. Designed to cover the global epidemics of diabetes and obesity, environmental and genetic risk factors, as well as interventions to improve diabetes outcomes and weight management. Includes lectures from several expert faculty members in the School of Public Health and the School of Medicine
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.645. Introduction to Clinical Trials. 3 Credits.
Introduces clinical trial design in the context of epidemiological concepts, covers various topics in the design and conduct of clinical trials, and profiles clinical trials that illustrate these issues. Topics include the definition and history of clinical trials; trial designs, including phase I-IV, cross-over, factorial, and large, simple designs; internal and external validity; controls, randomization, and masking; ethical issues; data analysis principles; monitoring of accumulating safety and efficacy data; and use of data from randomized trials.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.646. Epidemiology and Public Health Impact of HIV and AIDS. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.648. Clinical Trials Management. 3 Credits.
Provides an overview of methods related to the day-to-day conduct of multicenter randomized clinical trials with an emphasis on the Coordinating Center perspective. Using case studies of multicenter clinical trials for illustration, emphasizes topics related to practical applications such as organizational models, use of standardization, and performance monitoring. Discussion of methods is encouraged, including alternatives to usual practice.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.650. Nutritional Epidemiology (Sum Epi). 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.651. Emerging Infections. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.653. Epidemiologic Inference in Outbreak Investigations. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.654. Epidemiology and Natural History of Human Viral Infections. 6 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.658. Critical Reading of Epidemiologic Literature. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.660. Practical Skills in Conducting Research in Clinical Epidemiology and Investigation. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).
PH.340.663. Epidemiology Workshop: Interpreting and Using Epidemiologic Evidence. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.666. Foundations of Social Epidemiology. 3 Credits.
Students learn to apply social epidemiologic concepts, introduced through weekly online lectures and readings, and the use of discussions and case studies. Prepares students to understand and appreciate the contribution of social factors to disease etiology, course and the distribution of states of health in populations. After reviewing the conceptual and theoretical underpinnings of social epidemiology from an historical perspective, we focus on the scientific findings in the field from the 1970’s until today. The influence of social context on behavior is well known, and forms the backbone for most health promotion interventions; we focus initially on how the social environment influences behavior, by shaping norms, reinforcing social control, providing environmental opportunity, and coping strategies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.668. Topics in Infectious Disease Epidemiology. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.671. Topics in Management of Clinical Trials. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.674. Causal Inference: Emulating A Target Trial to Assess Comparative Effectiveness. 2 Credits.
Introduces students to a general framework for the assessment of comparative effectiveness and safety research. The framework, which can be applied to both observational data and randomized trials with imperfect adherence to the protocol, relies on the specification of a (hypothetical) target trial. Explores key challenges for comparative effectiveness research and critically reviews methods proposed to overcome those challenges. The methods are presented in the context of several case studies for cancer, cardiovascular, renal, and infectious diseases.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.676. Bayesian Adaptive Trials. 2 Credits.
Presents Bayesian adaptive designs and teaches students the skills and considerations necessary to construct such designs. Examines the operating characteristics of Bayesian adaptive designs and the benefits and costs of interim analyses, in particular within the regulatory framework.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.677. Infectious Disease Dynamics: Theoretical and Computational Approaches. 3 Credits.
Focuses on the dynamic processes that affect the spread of infectious disease. Presents basic conceptual approaches and a survey of specific theoretical and computational methods for simulating the spread of diseases. Specific topics include the effect of population heterogeneity on transmission, simulation of the impacts of interventions, social networks and the links between transmission dynamics and the evolution of pathogens. Particular methods include mathematical models, spatial-temporal analysis of epidemics, social network theory, genetic algorithms, individual based models and other tools of systems epidemiology. Concepts and methods are applied to historical epidemics, current emerging diseases and diseases of international public health importance.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.680. Environmental and Occupational Epidemiology. 4 Credits.
Introduces the key health effects of environmental and occupational exposures and the epidemiologic methods used to identify and estimate those effects. Emphasizes the interplay of methodological issues, including the assessment of environmental exposures and the understanding of specific disease processes in identifying the health impact of environmental exposures in the population. Students learn about environmental and occupational exposures (including water and air pollution, food contamination, ionizing radiation, persistent environmental pollutants and emergent environmental exposures) and key methodological issues relevant for these exposures in population studies (including study design, exposure assessment and biomonitoring, disease clusters, dose-response relationships, susceptibility, geographic analysis, and evidence synthesis).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.682. Pharmacoepidemiology Methods. 3 Credits.
Introduces the key elements of pharmacoepidemiology. Explores the utilization and effects of drugs in large numbers of people. Discusses the application of epidemiological methods to pharmacological issues. Focuses heavily on questions of drug safety and effectiveness, concentrating on clinical patient outcomes and on evaluating the use of therapies. Applies the research methods of clinical epidemiology (e.g., randomized trials, cohort studies, case-control studies, use of secondary data, attention to biases and confounding) to the content area of pharmacology (e.g., determinants of beneficial and adverse drug effects, effects of patient heterogeneity on drug effect, effects of non-adherence, active and passive surveillance for adverse events).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.683. Human Rights in Public Health Practice. 2 Credits.
Considers human rights as a tool, an analytical framework, and a source of ethical guidance in public health practice. Reviews basic concepts in human rights and examines how human rights can contribute to the work of public health practitioners in a variety of roles. These include analysis of public health problems, design of programs, the setting of public health policy, decision-making in day to day practice, research on human rights and public health. Also considers a human rights standard for ethical practice in public health and the linkages between public health practice and the work of human rights organizations in advancing human rights in health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).
PH.340.684. Pharmacoepidemiology: Drug Utilization. 3 Credits.
Provides an overview of drug classification systems as well as a review of data sources used for drug utilization research. Reviews methods of investigating drug utilization and evaluating interventions to modify utilization, such as time-series designs and segmented regression analyses. Discusses varied patient, provider, practice and system-level determinants of prescription drug utilization, including their impact on costs and quality of care. Emphasizes the impact of drug formularies, marketing and promotion of drugs, health insurance exchanges, and emerging evidence of benefits and harms.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.686. Introduction to Systematic Reviews and Meta-Analysis. 2 Credits.
Reviews methods used by those performing systematic reviews and meta-analysis, including building a team, formulating a research question and hypothesis, methods for searching the literature, abstracting information, and synthesizing the evidence both qualitatively and quantitatively. Covers how to formulate an answerable research question, defining inclusion and exclusion criteria, searching for the evidence, data extraction, assessing the risk of bias in the underlying studies, qualitative synthesis, meta-analysis, sensitivity analysis, and assessing meta-bias. Acquaints students with a few practicalities of conducting a systematic review using hands-on exercises.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.687. Epidemiology of Kidney Disease. 2 Credits.
Studies kidney disease comprehensively, emphasizing chronic and end-stage kidney disease, since kidney disease is characterized as an epidemic worldwide, and the prevalence continues to rise. Highlights controversies and areas of ongoing and future research by reviewing findings from cohort studies, clinical trials, and landmark studies. Emphasizes methodological issues specific to the study of kidney disease.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.688. PRACTICAL EPIDEMIOLOGY FOR BASIC SCIENTISTS. 3 Credits.
Introduces students of laboratory sciences to the population science of epidemiology, including methods and approaches to measurement, study design and inference. Similar in content to Principles of Epidemiology 340.601; however, examples highlight the interface between epidemiology and laboratory sciences, including the use of biomarkers to measure of exposure, outcome and risk.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.690. Epidemiologic Approaches to Hearing Loss and Public Health. 1 Credit.
Introduces biologic, epidemiologic and clinical aspects of aging-related declines in the auditory system. Demonstrates methods of assessment of auditory function for epidemiologic studies. Reviews current epidemiologic knowledge of sensory function and aging-related outcomes in older adults, including the epidemiology and consequences of dual sensory loss. Presents areas for future research and opportunities for intervention and prevention.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

Explores the public health implications of mass incarceration and discusses the human rights and ethical ramifications of providing health care to men, women, and children in jails, prisons, and detention centers both in the United States and internationally. Takes a systems approach to addressing the basic health needs of the prison population, including infection control, care for acute and chronic medical conditions, and mental health care. Students apply problem-solving skills and explore the challenges of providing care in incarcerated settings. Emphasizes the roles of human rights principles and professional ethics in public health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.694. Power and Sample Size for the Design of Epidemiological Studies. 1 Credit.
Systematically introduces students to sample size and power analysis for the most common epidemiological study designs. Provides participants with the key conceptual elements and practical tools for computing sample sizes to achieve a given level of precision and power in statistical tests.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.696. Spatial Analysis I: ArcGIS. 3 Credits.
Examines the use of ArcGIS Geographic Information System (GIS) software as a tool for integrating, manipulating, and displaying public health-related spatial data. Covers mapping, geocoding, and manipulations related to data structures and topology. Introduces the spatial science paradigm: Spatial Data, GIS, and Spatial Statistics. Uses selected case studies to demonstrate concepts along this paradigm. Focuses on using GIS to generate and refine hypotheses about public health-related spatial data in preparation for a formal statistical analysis. Although not a required part of the curriculum, discusses topics related to spatial statistical modeling throughout. Includes both lecture and lab formats with GIS concepts and software specific details demonstrated during the lab portions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.697. Spatial Analysis II: Spatial Data Technologies. 2 Credits.
Examines technologies for collecting, obtaining and creating spatial data. Technologies considered include, but are not limited to GPS, tablets, tracking devices, cell phones, mHealth, Google Earth, remote sensing applications, and the internet. Introduces software applications such as ArcGIS, QGIS, ERDAS, and R for integrating spatial data from the aforementioned technologies into useable forms for spatial analysis. Also covers metadata, data accuracy, and confidentiality/disclosure issues.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).
PH.340.698. Methods For Assessing Power, Privilege, and Public Health in the United States. 4 Credits.
Discusses emergent health issues and how the choice of measures for power, privilege, and inequality influence results in epidemiological research. Challenges you to reflect on how your own positions of privilege influence your interpretation of data and your public health practice. Provides an opportunity to apply epidemiology research skills to develop and execute a data-driven project on a real-world health problem that can will be presented and used by a community partner.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.699. Epidemiology of Sensory Loss in Aging. 3 Credits.
Introduces biologic, epidemiologic and clinical aspects of aging-related declines in the auditory, visual, and vestibular systems. Demonstrates methods of assessment of sensory function for epidemiologic studies. Reviews current epidemiologic knowledge of sensory function and aging-related outcomes in older adults, including the epidemiology and consequences of dual sensory loss. Presents areas for future research and opportunities for intervention and prevention.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.700. Advanced Stata Programming. 1 Credit.
Presents advanced topics in Stata Programming to expand upon the material in 340.600. Topics include simulations, advanced programming, file manipulation, and code optimization.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.701. Epidemiologic Applications of Gis. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.706. Methods and Applications of Cohort Studies. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.715. Problems in the Design of Epidemiologic Studies: Proposal Development and Critique. 5 Credits.
Presents the methodologic and logistic problems involved in designing and conducting epidemiologic studies. Students participate in the preparation of a research protocol for a study in a human population. Offers an opportunity to critically evaluate the adequacy and scientific merit of research protocols, develop an appreciation of the ethical aspects of conducting research involving human subjects, and apply methods and principles learned in earlier (340.751 - 753) and current courses to specific epidemiologic problems.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.717. Health Survey Research Methods. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.721. Epidemiologic Inference in Public Health I. 5 Credits.
Introduces principles and methods of epidemiologic investigation of disease and other health states. Presents different types of study designs, including randomized trials, cohort and case-control studies; measurement of exposures and outcomes; risk estimation; surveillance; program evaluation; and causal inference. Discusses evaluation measures for screening programs and health interventions. Links epidemiologic inferences with the development of policy. Activities provide experience in applying epidemiologic methods, interpreting findings, and drawing inferences.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.722. Epidemiologic Inference in Public Health II. 4 Credits.
Expands knowledge beyond introductory level epidemiologic concepts and methods material, using examples from the published literature. Emphasizes interpretation and the ability to critically evaluate issues related to populations/study design, measurement, population comparisons and inference, including: modern cohort study designs; advanced nested designs; novel techniques for exposure assessment; interpretation and utility of measures of impact; sources of bias and methods for their prevention; descriptive and analytical goals for observational study inference; the counterfactual model for defining exchangeability, cause, and confounding; and synthesis of inferences from observational studies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.723. Epidemiologic Practice Methods for Population Health Research. 2 Credits.
Introduces quantitative epidemiologic techniques applied by both academics and public health professionals to analyze and interpret routinely collected at the subpopulation level to target and address health inequities. Four modules include instruction in Stata and R, with topics including:1. Weighted Survey Analysis: Analytic techniques for the incorporation of weights in the analysis of survey data to make inferences about the target population.2. Calculating Life Expectancy: Calculation of single-decrement life tables using statistical programs as well as publically available Excel-based tools.3. Estimate Preventable Deaths: Econometric techniques for estimating preventable deaths and potential lives saved from risk factor modification.4. Conceptual Frameworks in Epidemiology: Apply graph theory to understand the relationships between variables in commonly-used causal frameworks. Understand the importance of using conceptual frameworks in guiding epidemiologic inquiry.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.724. Global Cancer Epidemiology. 2 Credits.
Examines the causes, incidence, and trends in cancer globally, with a perspective on the differences across settings. Provides an epidemiological foundation for understanding cancer statistics and engaging in international cancer research and control activities. Covers key concepts such as study designs for cancer epidemiology and interventions, use and meaning of common cancer statistics, levels of prevention, and cancer screening/use of diagnostic tests.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).
PH.340.725. Methods for Clinical and Translational Research. 1 Credit.
Provides an overview of the methods of translational research. Emphasizes developing skills in the interpretation and application of findings of translational research. Topics include study design, biomarkers, statistical analyses, validation strategies, and evidence synthesis methods.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.726. Implementation Research Methods to Address Real World Epidemiological Questions. 3 Credits.
Considers the use of observational data, including real-world program data, natural experiments and designs for interventions which cannot be ethically or practically randomized and experimental designs, focused on implementation and real-world effectiveness. Analyze preference-based research methods, which can be observational or experimental, highlighting the importance of human-centered approaches.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.727. Introduction to Health Survey Research Methods. 2 Credits.
Exposes students to the practical aspects of health survey research by emphasizing the development of skills to design and administer a survey questionnaire. Introduces students to formative research, questionnaire development, interviewer training, and quality assurance/quality control.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.728. Advanced Methods for Design and Analysis of Cohort Studies. 5 Credits.
Explores advanced methods useful for the design and analysis of cohort studies. Emphasizes methods for analyzing time-to-event data subject to staggered entries using advanced parametric and semi-parametric methods; analytical methods for incomplete observations in cohort studies; methods to measure effects of exposures on time-to-event using relative times and relative hazards; parametric survival analysis methods and taxonomy of hazard functions; coefficients of determination based on parametric models for survival data; regression methods for trajectories of biomarkers; methods for the analysis of interventions in observational studies: confounding by indication, marginal structural models for individual effectiveness; methods for estimating population effectiveness; and methods to jointly analyze longitudinal and survival data.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.729. U.S. Based National Health Surveys: their Application and Associated Research Methods. 2 Credits.
Introduces the purpose and application of national health surveys, and the strengths and limitations of this type of data. Uses publicly available survey data collected by the Centers for Disease Control and Prevention’s (CDC) National Center for Health Statistics (NCHS), including data from the National Health Interview Survey (NHIS) and National Health and Nutrition Examination Survey (NHANES) to provide practical experience in accessing the data files, designing and executing basic analysis using complex survey data and determining when and how to appropriately conduct age adjustment and trend analysis. While the class utilizes U.S.-based examples, the principles and methods covered are applicable to other settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.730. Assessment of Clinical Cardiovascular Disease. 2 Credits.
Familiarizes students with techniques used to detect and quantify the presence of clinical cardiovascular disease. Tour the hospital, and the dialysis, angiography, echocardiography, and vascular laboratories. Observe radiographic (CT and MRI) imaging of atherosclerosis and review gross and histological specimens of atherosclerosis in the pathology laboratory. Directly observe various cardiac imaging techniques performed including 1) cardiac echocardiography, 2) coronary or peripheral angiography, 3) coronary calcium scores and coronary CT angiography using multi-detector CT, 4) carotid and peripheral vascular studies using ultrasound, 5) the clinical assessment of blood pressure, and 6) DXA and anthropometric measures of body composition.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.731. Principles of Genetic Epidemiology 1. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.732. Principles of Genetic Epidemiology 2. 3 Credits.
Second offering in a three-part series of graduate courses in Genetic Epidemiology. Details the concepts of linkage disequilibrium and population genetics, including methods for admixture analysis useful for adjusting for individual variation in genetic ancestry/background. Presents the principles of genetic association analyses for quantitative and qualitative phenotypes for population-based studies. Details the concepts and tools related to confounding due to population stratification, and approaches for genome-wide association studies. Introduces methods for linkage analysis in families and use of high-throughput sequence data (whole exome and whole genome). Selected class sessions are dedicated to computer labs to illustrate the methods covered.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.733. Principles of Genetic Epidemiology 3. 3 Credits.
Concepts behind linkage and association studies in genome-wide studies, and demonstrates how they can be applied to complex qualitative and quantitative phenotypes (i.e. those where both genetic and environmental factors influence the phenotype). Introduces the principles underlying family-based and population-based study designs and analytical methods for both marker panels and sequencing data (whole exome and whole genome).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

Discusses advanced topics in genetic epidemiology methods. Builds on the knowledge gained in Principles of Genetic Epidemiology 1-3. Students discuss the details of the methods they have learned, and are also exposed to cutting-edge topics not yet in the mainstream. Also covers emerging topics such as CNV analysis, epigenetic analysis, sequencing analysis, and admixture mapping. Students also carry out an independent analysis project through the term.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).
PH.340.744. Advanced Topics on Control and Prevention of HIV/AIDS. 4 Credits.
Focuses on directed readings and discussion on the science and pathogenesis of HIV/AIDS. Covers dynamics of the HIV epidemic in the populated world, difficulties and contrasts between clinical management of HIV/AIDS in developed and developing countries, prevention and control modalities against HIV/AIDS, and predicting patterns of future growth of the HIV/AIDS epidemic with special reference to global economic impact of HIV vaccine and eradication issues of HIV/AIDS. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.751. Epidemiologic Methods 1. 5 Credits.
Introduces students to the principles and concepts used in epidemiologic research. Presents material in the context of an epidemiological framework with three major areas: populations and an introduction to study designs; measurement, including measures of accuracy and disease occurrence; and methods used for comparing populations. Illustrates synthesis lectures on how these elements come together in modern epidemiological research. Provides experience using laboratory exercises and assignments with applying concepts and calculations to problems drawn from real epidemiological data and published literature. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.752. Epidemiologic Methods 2. 5 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.753. Epidemiologic Methods 3. 5 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.765. Professional Epidemiologic Methods: Epidemiologic intelligence and Population Health Assessments. 2 Credits.
Focuses on practical skills for epidemiological assessments of population health, which include methods for monitoring epidemiological profiles and health trends, using public health information systems for measuring health burden, developing epidemiological profiles and conducting health situation analyses. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.766. Professional Epidemiologic Methods: Surveillance. 2 Credits.
Covers epidemiological methods and analyses for public health surveillance, including novel measurement approaches for "real and near real time" surveillance, syndrome surveillance and surveillance of public health events. Students learn interpretation of analytic strategies including descriptive and inferential epidemiological methods for surveillance data. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.767. Professional Epidemiologic Methods: Topics and Methods for Health Situation Analysis. 2 Credits.
Focuses on epidemiological methods and tools used in key health situation analyses. Includes the use of prospective epidemiological scenarios for monitoring health targets and indications. Also covers examples of health priority setting assessments; health needs assessments, and the methods for epidemiological stratification of public health problems. Laboratory exercises provide experience with applying concepts, methods and tools to problems drawn from real epidemiological data and published literature. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.768. Professional Epidemiologic Methods: Decision Making in Health Situation Analysis. 2 Credits.
Covers advanced health situation analyses for the evaluation of effectiveness of public health programs using real public health scenarios and available health information datasets. Covers selected epidemiological metrics for measuring social health inequalities and methods for informing evidence-based healthcare decision-making using epidemiologic data. Also addresses the role of available epidemiological evidence and translational research for public health programs. Laboratory exercises provide experience with applying concepts, methods and tools to problems drawn from real epidemiological data and published literature. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.769. Professional Epidemiology Methods. 4 Credits.
Trains future leaders using advanced epidemiological methods applied in modern public health practice, and provides students with the key epidemiological competencies for mid-level and senior-level epidemiologists. Covers examples of health priority assessments, health needs assessments, epidemiological stratification of public health problems, measuring health inequalities and evaluation of effectiveness of public health programs using real public health scenarios and available health information datasets. Also covers selected methods for translating epidemiologic data for decision-making. Addresses the role of available epidemiological evidence and translational research for public health programs. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.770. Public Health Surveillance. 3 Credits.
Accomplishes with Public Health Surveillance. A course is the core public health function essential for understanding and monitoring population health. Covers the theory, data collection methods, data analysis techniques, and presentation strategies of the systematic, continuous, analysis and interpretation of population health data to inform planning, implementation, and evaluation of public health practice. Students identify the different types of surveillance, and how each is applied in varied settings. Practical experiences/labs involve creating data collection tools, and reviewing how they can be applied in practice. Real-world surveillance data is used to illustrate methods for analysis, and how surveillance data should be presented to different audiences. Guests who are coordinating and conducting surveillance in different community settings lead interactive discussion sessions. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).
PH.340.774. Advanced Theory and Methods in Epidemiology. 4 Credits. Integrates and extends material learned in the first year Epidemiologic Methods sequence. Material focuses on the conceptual underpinnings and application of strategies for addressing key methodologic challenges that arise when carrying out epidemiologic research. Incorporates experiential learning components, including a term long self-directed group research project, and provides resources for students to acquire a working knowledge of how to apply presented methodological tools. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.775. Measurement Theory and Techniques in Epidemiology. 4 Credits. Reviews concepts, key assumptions, and published applications of measurement theory, including true scores and counterfactual outcomes, latent variables, and validity. Explores novel applications of item response theory to refinement of measures, assessment of differential item functioning, and calibration of metrics across diverse samples. Topics include analysis of novel types of data (biomarkers, high-dimensional data, administrative records, genetics), item response theory, latent growth curve models for longitudinal data and their extensions, and cross-study statistical harmonization and co-calibration. Draws examples from epidemiologic applications in the behavioral and social sciences. Offers students opportunities for applying lessons from didactic lectures in a laboratory setting using prepared examples. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.776. Study Design and Analysis for Causal Inference With Time-Varying Exposures. 3 Credits. Presents a holistic framework for studying causal effects of time-varying exposures. Builds on 140.664 and 340.774 and explores how to articulate causal questions and clarifies assumptions needed to identify the effects of time-varying exposures. Distinguishes total effects of exposures at a given point in time from those that involve cumulative doses or adherence to dynamic treatment rules. Outlines design parameters such as eligibility, start of follow-up, and artificial censoring with data from cohorts or administrative healthcare records. Reviews the motivation, intuition, and application of advanced methods such as time-dependent propensity scores, marginal structural models, and the parametric g-formula to overcome time-varying confounding and selection-bias. Emphasizes practical application and robustness checks, guideposts for choosing among study designs and analytic methods, and comparative strengths for studies with an etiologic vs. translational focus. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.800. MPH Capstone Epidemiology. 2 Credits. The MPH Capstone is an opportunity for students to work on public health practice projects that are of particular interest to them. The goal is for students to apply the skills and competencies they have acquired to a public health problem that simulates a professional practice experience. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.802. Expert Searching for High Quality Evidence in The Online Environment. 2 Credits. Introduces students to effective and efficient searching of the medical literature, in particular the skills and knowledge needed to produce an effective search in support of a systematic review of the medical literature. Discusses existing standards and evidence for these standards. Familiarizes students with software that helps with manage the results of literature searches. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.803. Advanced Topics in Cardiovascular Disease Epidemiology. 2 Credits. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.810. Field Placement Epidemiology. 1 - 22 Credits. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.820. Thesis Research Epidemiology. 1 - 22 Credits. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.830. Postdoctoral Research Epidemiology. 1 - 22 Credits. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.840. Special Studies and Research Epidemiology. 1 - 22 Credits. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.847. SS/R: ADVANCED LATENT VARIABLE MODELING: MARRYING CONSTRUCT WITH MEASUREMENT. 4 Credits. Reviews concepts, key assumptions, and published applications of measurement theory, including true scores and counterfactual outcomes, latent variables, and validity. Explores novel applications of item response theory to refinement of measures, assessment of differential item functioning, and calibration of metrics across diverse samples. Considers analysis of novel types of data such as biomarkers, latent class analysis, item response theory, latent growth curve models for longitudinal data and their extensions (e.g., growth mixture modeling, piecewise growth modeling, parallel process growth modeling), bivariate double change score models, and cross-study statistical harmonization. Draws examples from epidemiologic applications in the behavioral and social sciences. Offers students opportunities for applying lessons from didactic lectures in a laboratory setting using prepared examples. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.853. First Year Epidemiology Doctoral Seminar. 1 Credit. Introduces current discussion, controversies, and applications of epidemiology. Reviews landmark papers and current literature and provides guided discussions of the materials. Focuses on exploring key paradigms that have influenced the field of epidemiology. Includes discussion of current trends influencing epidemiologic research and training, mentorship, controversies in the assessment of populations and outcomes, individual-level vs. population-health, and the relationship of epidemiology to the health care system. Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).
PH.340.855. SS/R: Biological Basis of Cardiovascular Disease Epidemiology. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.860. Current Topics in Epidemiologic Research. 1 Credit.
Attended by staff, students and faculty, this seminar series is an opportunity for the Department of Epidemiology to come together for exposure to epidemiologic methods as applied in research settings. Provides a broader perspective on contemporary issues in epidemiology and its research, through presentations of current research in the field of epidemiology.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.861. Clinical Trials: Procedures, Design, and Interpretation of Results. 3 Credits.
Augments Introduction to Clinical Trials (340.645). Describes current standards for clinical trial protocols, consent procedures and describes regulatory requirements and expands upon design and analysis concepts presented in 340.645. Reviews key standards for clinical trial protocols, including the SPIRIT guidelines, recruitment and consent of participants, and principles for data acquisition and sharing. Covers regulatory requirements for drug development and adverse event monitoring as well as the statistical aspects of data monitoring for clinical trials. Provides more in-depth discussion of newer designs for clinical trials including non-inferiority design and adaptive designs. Investigates specific analysis issues for handling missing data, interim monitoring and cost-effectiveness. Addresses the synthesis of results from clinical trials in meta-analyses and the role of post-marketing surveillance in assessing drug safety.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.863. Doctoral Seminars in Epidemiology. 3 Credits.
Provides an opportunity for doctoral students to discuss challenges in epidemiology and apply methods and principles learned in didactic courses to formulate research questions and specific aims. Participates in the preparation of dissertation proposal components, develops skills to effectively communicate research questions, and critically evaluate the scientific merit of research proposals.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.865. Teaching Epidemiologic Methods and Concepts At the Graduate Level. 1 - 8 Credits.
Review and evaluate critical skills in teaching and communicating science, epidemiology, methods, and theory to a wide range of individuals. Provides a feedback mechanism for learning best practices in education at the graduate level.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.871. Welch Center Research Seminar. 1 Credit.
Students, postdoctoral fellows, and faculty present scientific papers from the current and/or classic literature dealing with epidemiologic research, with a focus on clinical and cardiovascular epidemiology. Emphasizes presentation skills and the ability to critically evaluate scientific papers. Uses a journal-club format in which one or more papers are distributed in advance. Participants are expected to read and discuss the assigned material. Media reporting/coverage in the lay and medical press is explicitly discussed related to the article. Provides a forum for the discussion of the appropriate use of statistical methods for various study designs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.872. Genetic Epidemiologic Seminars in Current Research and Methodology. 1 Credit.
Emphasizes the importance of reading, understanding, and discussing literature. Students, postdoctoral fellows, and faculty present scientific papers from the current literature in genetic epidemiology. Provides students the opportunity to interact with faculty regularly. Reviews current topics and methodology in genetic epidemiology with current faculty and research leaders and practitioners.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.873. Contact Tracing During the COVID-19 Pandemic. 1 Credit.
Provides basic elements and methodology of contact tracing and practical experience by executing these newly learned skills. Reviews current issues and concerns encountered by students. Evaluates and promulgates best practices in contact tracing.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.874. Current Topics in Human Rights. 1 Credit.
Reviews a common framework for the analysis of comparative effectiveness and safety research CER randomized trials and observational studies, and presents several applications for cardiovascular, renal, and infectious diseases.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.895. MPH Practicum: Epidemiology. 1 - 5 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

Lab for Principles of Epi Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.921. EPIDEMIOLOGIC INFERENCE IN PUBLIC HEALTH I Lab.
EPIDEMIOLOGIC INFERENCE IN PUBLIC HEALTH I LAB Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.951. EPI Methods 1 Lab.
Lab for PH.340.751 Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.952. EPI Methods 2 Lab.
Lab for PH.340.752 Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).
Lab for EPI 340.753
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).
