AS.280 (PUBLIC HEALTH STUDIES)

AS.280.101. Introduction to Public Health. 3 Credits.
This course provides an overview of the field of public health. Topics include the major causes of morbidity and mortality; the socioeconomic, behavioral, and environmental factors that affect health; the analytical methods used in the field; the role of government in protecting the public's health; key features of the U.S. health care system; and current challenges in the field. The course also introduces students to the basic conceptual models and approaches that are central to public health practice. This course is restricted to freshmen. Your enrollment may be withdrawn at the discretion of the instructor if you don't meet one of those criteria.

AS.280.120. Lectures on Public Health and Wellbeing in Baltimore. 1 Credit.
An introduction to Urban Health with Baltimore as a case study: wellbeing, nutrition, education, violence and city-wide geographic variation. Lectures by JH Faculty, local government/service providers and advocates.

AS.280.161. Applications of Biological Concepts in Public Health. 3 Credits.
This course explores the basic biology concepts relevant to public health. Case studies will be used to examine key scientific principles and their application. This course is designed for public health students who are not intending to pursue a career in natural sciences or medicine. This course satisfies the Public Health Studies Biology requirement, but does not satisfy Pre-Med requirement. All freshmen must have taken or be currently enrolled in AS.280.101 to register. Department Approval Required.
Area: Writing Intensive
AS.020.151

AS.280.225. Population, Health and Development. 3 Credits.
This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS and Covid.

AS.280.240. Research Methods in Public Health. 4 Credits.
This course examines the research process, with an emphasis on formulating research questions, critically evaluating published research, and drawing objective conclusions from a body of scientific literature. Students conduct a systematic review of the scientific literature related to a public health issue. Labs focus on developing and documenting a sound review methodology and communicating the review findings effectively in writing.
Area: Writing Intensive
AS.280.101 AND (AS.280.345 OR AS.200.314 OR EN.553.230 OR EN.553.310 OR EN.553.311 OR EN.553.420 OR EN.553.430 OR EN.560.348 OR EN.553.211 OR AS.200.201) OR (EN.550.111 AND EN.550.112)

AS.280.312. Media, Politics, and Evidence in the History of Public Health. 3 Credits.
This writing intensive course will encourage students to consider what counts as evidence among public health professionals as well as popular audiences. Using case studies from the field of epidemiology, now emblematic of the field, students will learn about historical changes in theories of population health and disease. Through a series of writing assignments, students will interrogate the formal structure of scientific arguments and gain practice in synthesizing and communicating complex ideas to a lay audience. Juniors/Seniors Only
Area: Writing Intensive
AS.280.350

AS.280.320. Seminar on Public Health and Wellbeing in Baltimore. 3 Credits.
Seminar combines lectures from AS.280.120 with additional readings and discussion to more deeply address urban health issues. The course will revolve around student projects that can impact health and wellbeing in Baltimore. If you are accepted for this course do NOT register for AS.280.120. Course registration is by instructor permission only. You will be asked to provide a brief description of a project in order to determine your potential linkage with this course. This course is utilizing the online active approval process. Permission requests should be submitted via SIS Self-Service upon the opening of your registration period. The instructor will review requests and approve registrations using SIS Self-Service for Faculty. Please note, a request does not guarantee registration into the course. Status inquiries should be address to the instructor or departmental administrator.

This course will focus on mind-body practices and their place in public health. We will learn about different mind-body practices and talk about if/how mind-body practices can help ameliorate the national burden of disease. We will also learn how to identify evidence based practices (EBPs) in public health and learn the core components of designing EBPs. We will then combine what we learned about mind-body practices and designing EBPs to create programs that lessen the burden of disease. The mind-body portion of this course is experiential and will include the practice of meditation, yoga, other mindfulness exercises. You will also be asked to reflect on these practices through journaling.
AS.280.101

AS.280.335. The Environment and Your Health. 3 Credits.
This course surveys the basic concepts underlying environmental health sciences (toxicology, exposure assessment, risk assessment), current public health issues (air, water- and food-borne diseases) and global health threats (climate change, designing healthy communities, and environmental justice).
AS.280.101 OR AS.270.103

AS.280.340. Fundamentals of Health Policy & Management. 3 Credits.
Through lectures and small group discussions, students will develop a framework for analyzing health care policy problems and gain familiarity with current issues including managed care, Medicare and the uninsured. Public Health Studies majors have 1st priority for enrollment. Your enrollment may be withdrawn at the discretion of the PHS program if you are not a PHS major.
AS.280.101
AS.280.345. Public Health Biostatistics. 4 Credits.
Using problem-based learning focusing on public health topics, students learn to describe & summarize data, make inferences regarding population parameters, & test hypotheses. Recommended Course Background: Four years of high school math.
Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR AS.200.314 OR AS.200.315 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430 OR EN.560.348

AS.280.346. Introduction to R Programming for Public Health. 1 Credit.
Formerly known as Advanced Biostatistics Laboratory, a complementary course to 280.345, Public Health Biostatistics, this course teaches R programming skills necessary for conducting independent data analyses, beyond those presented in the main course. No programming experience is necessary, but a willingness to learn independently and work with other students is indispensable.

AS.280.347. Health Data Analysis Practicum. 3 Credits.
Students will learn to formulate precise scientific and policy questions, design exploratory and confirmatory statistical analyses to address the questions, conduct appropriate analyses using the statistical package R, and communicate their findings through graphical and tabular displays that are presented in writing and in person. The course will be run seminar style in which students conduct data analysis to present to one another in one meeting per week. Evaluation will be through class participation and a final project in which students will analyze their own data set to address a question of their choice. Students need to have taken an introductory statistics course at the level of AS.280.345 (Public Health Biostatistics) and must have some experience using the statistical software R to perform basic analyses.

AS.280.349. Making Work Safer. 3 Credits.
This course explores major health and safety issues that affect workers in the United States, with an emphasis on developing and selecting interventions to prevent occupational injuries. In this course, students will examine the morbidity, mortality, and economic costs associated with work-related injuries; interact with key surveillance systems and other data sources used for tracking such injuries; and apply principles of injury prevention and decision-making through a basic policy analysis process.

AS.280.350. Fundamentals of Epidemiology. 4 Credits.
A practical introduction to epidemiology focusing on the principles and methods of examining the distribution and determinants of disease morbidity and mortality in human populations. This course is restricted to Public Health Studies only. Any remaining open seats at the start of the semester will open up to all other majors.

AS.280.355. Introduction to Social and Behavioral Determinants of Health. 3 Credits.
Introduces students to a social ecological perspective of population health; explains key theories and models of health behavior; describes social and behavioral factors affecting health outcomes; illustrates the role of factors such as racism, income inequality, social norms, culture, communication and psychological constructs in health outcomes; demonstrates applications of these theories and models in health behavior research and intervention.
Area: Writing Intensive

AS.280.360. Clinical & Public Health Behavior Change. 3 Credits.
This course explores the theory and practice of changing the health behaviors of individuals, and the public health and medical impact of doing so. Theoretical concepts are integrated with practical clinical applications, especially in the areas of diet and fitness. Skill building in persuasive, health-related communication will be included in smaller group discussions.

AS.280.365. Public Policy, Politics and Public Health. 3 Credits.
This course is composed of lectures on public policy and political issues that impact the arena of public health. With real-life examples of public health practice in Baltimore and around the country, this course will also expose students to the wide array of opportunities available to those pursuing a career in public health. Throughout the course a major effort will be made to expose students to the wide array of opportunities that are available to those pursuing a career in public health.

AS.280.368. Global Health Principles and Practices. 3 Credits.
Global health addresses the staggering global disparities in health status, drawing on epidemiology, demography, anthropology, economics, international relations and other disciplines. We review patterns of mortality, morbidity and disability in low and middle income countries, starting with malnutrition, infectious diseases and reproductive health, and continuing to an emerging agenda including mental health, injury prevention, surgical care, chronic diseases, and health impacts of climate change. Gender, health systems and health workforce challenges, and career trajectories in global health are also discussed. Recommended course background: Minimum of one prior course in Public Health.

AS.280.399. Community Based Learning - Practicum Community Health Care. 3 Credits.
This course introduces students to a social structural, justice orientation to public health, with an emphasis on service learning in Baltimore City. Through lectures, class discussions, reflection practices and experiential learning, students will gain an understanding of education, healthcare, housing and other sectors as social determinants of health. The course draws on a social ecological framework and highlights the role of relationships and policies in impacting community resources foundational to health and well-being. Students will choose a community-based organization according to their interests and schedule and, working in teams, complete 45 hours of service-based learning. Grades are based on class participation, completion of a service learning project, group presentation, and papers. Open to Junior Public Health Studies majors and, space permitting, to others upon permission of instructor. This course qualifies as a PHS upper elective; however, it does not satisfy the PHS Applied Experience requirement.
AS.280.438. Reproductive Health in Crisis: Issues in Meeting the Needs of Vulnerable Populations. 3 Credits.
Introduces students to the reproductive health needs of over 65 million people affected by humanitarian, economic, and environmental crises globally. Presents an overview of health care delivery systems in a variety of contexts, and examines the reproductive health consequences of disruptions in service provision during times of crisis. Examines the impact of policies and programs targeting affected groups. Discusses international standards in humanitarian response. Includes discussion of maternal and newborn health, family planning, abortion, and gender-based violence. Students develop competency to conduct reproductive health service needs assessments and design an emergency preparedness plan that ensures provision of essential care. For the final project, students apply their skills to plan a response program to meet the reproductive health needs of a specific crisis-affected population. This is a Gordis Teaching Fellowship course. Area: Writing Intensive

AS.280.439. Ecological Change and Infectious Disease. 3 Credits.
This course will introduce students to key concepts in infectious disease ecology and epidemiology. Students will also learn how key ecological changes are influencing infectious disease dynamics. Ecological changes explored in the course include climate change, water management, deforestation, agriculture, and urbanization. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows. AS.280.335; AS.280.350 can be taken concurrently

AS.280.440. Introduction to Harm Reduction: Principles and Examples in Public Health. 3 Credits.
Harm reduction is an increasingly popular paradigm in public health research and practice. This course introduces students to the principles of and current research in harm reduction. The class will focus on a) history and principles of harm reduction, and appropriate research methods; b) harm reduction & substance abuse and policy; c) harm reduction & sexual health and sex work; d) ethical considerations in harm reduction. This seminar-format course uses journal clubs, small group discussions, and interactive debates. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows. AS.280.345 OR EN.553.112 OR EN.550.112 OR EN.553.211 OR EN.550.211

AS.280.441. Social Media and Public Health. 3 Credits.
This upper-level undergraduate research methods design course explores the growing role of social media in public health research. The course first introduces the current social media landscape, tying in different public health and health communication theories of importance to social media research. This is followed by a discussion of qualitative and quantitative research methods that have been used to conduct social media research, as well as the unique ethical considerations presented by this novel field. The course will then delve into each type of social media platform in depth, discussing how public health research has been conducted and how this ever-changing field continues to move forward. By the end of the course, students will have given explicit consideration to the strengths and challenges posed by conducting social media research in public health, and will be able to apply social media research methods to a public health issue of their interest. Some background in research methods is preferred but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.442. Genetics and Public Health. 3 Credits.
DNA is the code of life and variability in this code can be critical in determining human health outcomes. In a post-genomic era with increasingly advanced genetic tools and data it is critical for future public health professionals to understand the role that genetics plays in disease on the individual and population level. More and more, genetics is instructing public health interventions by informing individuals of their risk of acquiring certain diseases, explaining disease etiology, guiding treatment options in the wake of personalized medicine, and may dictate the future of genetic-based disease treatment in the form of gene therapy. The goal of this semester long course is to expand upon basic genetic concepts and apply them to understanding how variation in the human genome can impact health outcomes and inform treatment. We will look at how genetic diseases are inherited, the various ways in which they can manifest as pathology, and how they are discovered and diagnosed. We will also learn how to interpret genome wide association studies and genetic test results and explore the field of genetic counseling. We will finish by looking at the future of genetic medicine by looking at personalized medicine, gene therapy, and gene drive technologies and the potential ethical implications of these interventions. Prior genetics coursework is useful, but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows. AS.020.151 AND AS.020.152

AS.280.443. Health-Related Stigma: Concepts, Considerations, and Interventions. 3 Credits.
Health-related stigma plays an important role in health and social outcomes, however its impact on individuals and populations varies according to context. Through readings, discussions, and assignments, students acquire the framework and skills to conceptualize and assess stigma across a range of health domains. To develop their understanding and analytical approach, students examine examples of HIV/AIDS, smoking, obesity, addiction, and mental health stigma. In each case, students consider key questions including: What are the forms and consequences of stigma? What theories apply? What ethical issues exist? How might interventions minimize or leverage stigma for health promotion? Throughout the semester, students also consider broader questions including: When should interventions target stigma? What are the ethical considerations in health-related stigma research? Is stigma always a threat to health? As the course places a strong emphasis on reading, critiquing, and applying health and social scientific literature, knowledge of or experience with psychology, sociology, ethics, and/or statistics is recommended but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted registration as space allows.

AS.280.445. Mental Health and the Gut. 3 Credits.
Explores the strong, bidirectional communication between the gastrointestinal tract and the brain. Reviews the role of the microbiome in shaping brain health, the link between gastrointestinal symptoms and mental health, and new and seminal research on the brain-gut connection in specific psychiatric disorders, including neurodevelopmental disorders, sleep disorders, depression and anxiety, bipolar disorder, schizophrenia and other psychotic disorders, dementia, and Parkinson's/other movement disorders. Develops students’ skills in reading and critiquing literature as well as designing and analyzing studies on the microbiome and mental health. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows. AS.280.345 OR (EN.553.211 (EN.550.211) OR EN.553.112) Students who have taken AS.280.236 are not permitted to take AS.280.445.
AS.280.446. Quality of Life: Concepts and Challenges in Assessing Wellbeing. 3 Credits.
Quality of life means something different to nearly everyone. While public health and regulatory professionals agree that quality of life matters, developing tools that appropriately conceptualize and evaluate quality of life across varying populations remains a challenge. This course will explore the role of quality of life and other health status and functional outcomes in public health. The course is structured in three segments:
1) Conceptualizing quality of life, 2) Measuring quality of life, 3) Valuing quality of life. The class challenges students to assess the existing landscape in quality of life research and critically evaluate how diverse literature bases (including psychology, medicine, economics, & regulatory science) have influenced public health research, policy, and practice. Students will also gain experience in analyzing and drawing meaningful research and regulatory conclusions from experience data such as patient reported outcomes and patient preference information. This course will be structured as a seminar featuring lectures, in-class journal clubs, guest speakers, and small-group lab activities. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.345 OR (EN.553.211 (EN.550.211) OR EN.553.112)
AS.280.447. Ethical Considerations When Working With Marginalized Populations- A Public Health Perspective. 3 Credits.
Interested in developing best practices to work with marginalized people in public health? This course is for you! We will use a combination of lectures and discussions to critically analyze public health research methodologies at the intersection of ethics, justice, and human rights when working with marginalized populations. The first part of the course is an introduction to theory to equip students with a shared language to understand how marginalization, justice, and ethics are conceptualized in public health. In the second part of the course, students will delve deeper into various public health research methodologies and apply ethical guidelines to a variety of public health cases in the U.S. and internationally. The course will culminate with students designing case studies to present and provide feedback on based on ethical considerations. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.448. Vaccine Development, Epidemiology, and Hesitancy in the Modern World. 3 Credits.
Immunization is one of the most cost-effective and successful public health measures available, but loss of public confidence in vaccines has resulted in the resurgence of vaccine-preventable diseases. This course will review the process of vaccine development and students will understand the use and utility of immunizations for disease prevention. Students will gain an in-depth understanding of the vaccines that have been successfully introduced into routine immunization schedules. This course will discuss post-licensure vaccine surveillance as well as current domestic and international policy issues in vaccine development, supply, delivery and utilization. We will also examine the origins of vaccine hesitancy and discuss the impact of "anti-vaxxers" on immunization coverage and the subsequent return of vaccine-preventable diseases. Students will have the opportunity to work in teams to critically evaluate multi-level interventions to target vaccine hesitancy and improve immunization coverage, and propose a recommendation that will reduce the morbidity and mortality of a specified vaccine-preventable disease. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.350

AS.280.449. Corporate Influence on Public Health. 3 Credits.
Corporate practices are an often under-recognized social determinant of health. Corporate-induced disease contributes to morbidity and mortality worldwide, and a better understanding of the mechanisms underlying corporate-induced diseases illuminates pathways by which social and environmental factors influence health. This course will investigate the influence of industry using tobacco, alcohol, sugar-sweetened beverage, food, and pharmaceutical industries as examples, emphasizing ecological models. Students will evaluate the historical and current role of each industry as they effect health outcomes, research, public health policy, and public perceptions and behaviors. Students will use case studies from around the globe that exemplify instances of influence and interference and critically consider the power and activity of multibillion-dollar multinational companies. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.450. The Dreaded R-Word: The Ethics of Rationing and Resource Allocation in Health Care. 3 Credits.
Uwe Reinhardt, the renowned Princeton health economist, once labeled rationing as "the dreaded R-word." Sarah Palin infamously criticized the Affordable Care Act for, in her view, setting up rationing "death panels." Many others recoil from the idea of rationing, considering it a "heartless, mechanistic withholding of desirable goods or services by faceless bureaucrats." In contrast, "resource allocation" does not typically inspire the same response. Why does the idea of rationing in health care generate such a negative emotional response? Is this response justified? Does rationing differ from resource allocation as a means of setting priorities for health care? Who has the authority to set priorities for health care? On what basis should priorities be set? Why must priorities be set at all? This class addresses questions like these and offers a broad introduction to the ethics of priority-setting in health care. The class will devote significant time to understanding both the conceptual and normative foundations of priority-setting as well as specific proposals for how to set priorities. We will explore priority-setting in health care at both the individual and population level through various case studies including organ transplants and flu pandemic preparation. We will discuss priority-setting in the context of public health and universal health coverage and explore the role of global organizations like the World Health Organization and World Bank in setting priorities for health care. We will also consider whether priority-setting is compatible with the pursuit of social justice. Gordis Teaching Fellowship course.
AS.280.451. Born a Girl: Issues in Women's Health From a Life Course Perspective. 3 Credits.
The discussion surrounding women's health has often remained limited to understanding women's reproductive health needs. This course seeks to move beyond this topic to explore the key issues affecting women's health, utilizing a life course perspective. This undergraduate course will focus on a select number of themes including: a) understanding the history of women's health; b) sexual and reproductive health; c) maternal health; d) violence against women and girls; e) the needs of younger girls and aging women; and f) how mental health and stigma affect women. The course brings both U.S. and global perspectives to enhance the understanding of how the field of women's health has evolved over time. It will also address some of the challenges public health professionals continue to face in addressing the health and wellbeing of women today. This seminar-style course combines class presentations with journal clubs and small group discussions. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.350
AS.280.452. Policy, Politics, and Power in Health Equity. 3 Credits.
Health disparities are avoidable, unjust differences in health opportunities and outcomes related to factors such as race and ethnicity, education, class, citizenship, disability, sex and gender identity, and sexual orientation. These disparities reflect the systems that distribute resources, privileges, and power across society and mediate exposure to physical and mental health hazards such as economic deprivation, discrimination, violence, unhealthy environments, uninsurance, and inadequate medical care. Health equity, which is often referred to as social justice in health, is an ethical value that drives efforts to eliminate these disparities. As the National Academy of Medicine asserts in each of its reports, “Knowing is not enough; we must apply. Willing is not enough; we must do.” The purpose of this course is to introduce students to essential concepts, literature, and policy issues related to health disparities and to prepare them to use their knowledge to build effective policy strategies in support of health equity. Gordis Teaching Fellowship course. Completion of AS.280.340/ Fundamental of Health Policy Management is recommended, but not required. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.453. Contemporary Social Movements in Public Health. 3 Credits.
Health social movements attempt to alter power structures in order to achieve greater health equity, promote access to resources, and change perceptions of disease. But what distinguishes a moment from a movement? Under what conditions can health social movements lead to lasting policy and social change? Together we will explore a wide range of contemporary health social movements such as Black Lives Matter, MeToo, gun reform, US healthcare reform, environmental movements, and others. We will analyze the types of goals, resources, and tactics used in these movements and consider their contributions to the shaping of health-related policies and practices. Students will demonstrate their understanding of course themes through quizzes, written assignments, class discussions, and brief presentations. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.454. What is the Link Between Oppression and Mental Health? Combining Theory, Concepts, and Empirical Science to Explain Minority Mental Health. 3 Credits.
In this three-module course, students will first gain knowledge on the theoretical orientations that inform the social determinants of health, in combination with conceptual approaches in the field of trauma and violence research, in order to formulate a theoretical, conceptual, and empirical understanding of minority mental health. In the final module, students will study select mental health concerns (e.g., trauma, depression, anxiety, suicide) that affect specific minority populations, including discussions around the lived experiences of minority mental health. This culminates in a final group presentation on empirical research from an approved minority mental health topic of their choice that will be delivered as a TED-style talk. The course will run with graduate-level expectations. Students should anticipate weekly reading assignments to inform group lab presentations and discussions. There will be three brief individual writing assignments of 5 pages or less that critically analyze current minority mental health research. Upon completion of the course, students will be able to discuss minority mental health research with the necessary contexts of theory, research, and life stories that inform current public mental health approaches. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Students cannot take this course is they are taking AS.194.301.

AS.280.455. Understanding and Engaging Adolescents in Public Health Context. 3 Credits.
Adolescent health is an increasingly important component of the public health agenda. As adolescence is a unique and pivotal stage of life, a rich understanding of this population is important for successful public health engagement. This seminar-style course seeks to provide a foundation for those interested in adolescent health and support effective engagement with adolescent populations. The first half of the course offers theoretical and contextual insights on adolescents ranging from discussing public health significance, to developmental and life course perspectives, to influences across socioeconomic levels. The course then delves into practical and methodological considerations for working with this population including ethical matters, insights on reaching adolescents, and approaches to collecting information. This course culminates with deliberations of successful examples of engaging adolescents in public health as well as the future of the adolescent health field. This is a Gordis Teaching Fellowship course open to juniors and seniors. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.456. Introduction to Vaccinology. 3 Credits.
Over the past century, vaccines have made a tremendous impact on human health, averting an estimated 2-3 million deaths each year. This course aims to introduce students to the interdisciplinary field of vaccinology by building the vocabulary and skills necessary to critically evaluate existing and future vaccines and vaccine programs. Topics include the parameters used to characterize vaccines, the vaccine development pathway, vaccine policy and emerging topics in vaccinology. Although the primary focus of the course will be on the public health aspects of vaccinology, we will also cover key biological principles. At least one semester of biology is strongly recommended as a prerequisite for this course. Gordis Teaching Fellowship course. Priority registration will be given to Public Health Studies majors. AS.280.101 AND AS.280.240

AS.280.457. Cohorts and Trials: Interpreting Evidence in Epidemiology. 3 Credits.
How do we know smoking is a risk factor for heart attacks? Why did the NIH invest millions of dollars into the Atherosclerosis Risk in Communities (ARIC) Study or the Systolic Blood Pressure Intervention Trial (SPRINT)? When does the FDA accept a vaccine or drug as safe for use? Why do studies disagree about whether coffee is good or bad for health? This course delves into how two major study designs—cohorts and clinical trials—are used to build and interpret a body of epidemiologic evidence, including the practical context of how cohorts and trials are devised, proceduralized, and funded within the larger scientific enterprise. This is a discussion-based class; active sessions modeled after research journal clubs and consortium workshops drives peer-to-peer learning along with literature-based lecture. Gordis Teaching Fellowship course. Priority registration will be given to Public Health Studies majors. AS.280.350
AS.280.458. Monitoring, Evaluating, and Learning to Improve Public Health Programs. 3 Credits.
This course introduces basic principles and methods for monitoring and evaluating public health programs. The course will familiarize students with different types of program evaluation, including formative and summative evaluations, and with approaches to monitor and improve program performance. Students will apply their knowledge to design a logic model, formulate evaluation questions, and identify appropriate quantitative and qualitative methods to answer those questions. Additionally, students will reflect on the importance of conducting evaluations that meet the needs of stakeholders and strategies for integrating an equity focus into the design of evaluations. The goal of the course is to help students to think critically and provide them with the practical skills to monitor, evaluate, and learn from data to improve program implementation and public health impact. Gordis Teaching Fellowship course. Priority registration will be given to Public Health Studies majors. AS.280.350

AS.280.459. Statistics for Humans: Failures, Values, and Conflicts in Data Science. 3 Credits.
Data does not speak for itself, and the way we use data is a matter of choice. This course will explore the human element of statistics: how statistics drive decision-making, how people can be deceived by statistics, what problems data science poses for the 21st century, and other topics. Case studies in public health will be emphasized. A previous course is statistics is recommended. This is a Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.460. Urban Health: Global Perspectives for Sustainable Development. 3 Credits.
Urban health is a growing area of public health focus around the world. The interdisciplinary nature of this field of study presents a unique challenge for researchers and policy makers, but also a critical opportunity to share and integrate knowledge using a systems thinking framework. The seminar style course will consist of a brief introduction to the goals and frameworks of urban health planning, followed by four urban case studies represented by four cities around the world at varying stages of industrialization. Material will be guided by discussions and debates about pressing urban health topics. This is a Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.461. Exploring Food Insecurity Through a Racial Equity Lens. 3 Credits.
This course will apply a racial equity lens to explore the issue of food insecurity in the US, including the history, measurement, and current strategies to reduce food insecurity at the national, regional, and local levels. Students in the course will explore how they can take individual action to contribute to dismantling racism and fighting against the root causes of food insecurity. This course will require students to critically reflect on readings and discussions that explore the connection between systems of oppression and food insecurity. This is a Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.462. Practicing Equity in the American Healthcare System. 3 Credits.
This course provides a broad orientation to key structures within the American healthcare system and their role in promoting health equity. These structures include providers, payers, local health departments, evidence development, health information technology and innovative policy. This course will emphasize practical experience with these structures in the context of health equity through case studies within the class and an integrative project in which students will plan and execute their own project. This is a Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Malnutrition remains one of the largest public health issues in low and middle income countries (LMICs); it has been estimated that 1 in 9 individuals globally remain hungry, and malnutrition related factors contribute to 45% of deaths in children under 5 years old. While global progress has reduced the burden of malnutrition in the past two decades, much of the progress could be undone by the impacts of COVID-19. This course will review the causes and the burden of malnutrition in LMICs and will provide students with the understanding of the various types of malnutrition. This course will discuss the multi-sectoral nature of malnutrition and the role each sector has in addressing malnutrition. In light of recent events, many of these sector’s normal operations have been disrupted by the COVID-19 pandemic and disease transmission mitigation strategies. We will examine how the COVID-19 pandemic has influenced these sectors and the anticipated effects on malnutrition. This is a Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.464. Risk, Resilience, and Public Health Engagement with Marginalized Communities. 3 Credits.
In public health research and practice, marginalized populations are frequently labeled as “at risk” for negative health outcomes and as being more likely to engage in “high risk” behaviors. All too often, risk assessments and behavior change efforts target individuals without adequate consideration of social and environmental factors contributing to risk and vulnerability. The concepts of resilience and protective factors have gained attention in public health for their focus on supporting positive mental and behavioral health in the face of adversity. This seminar-style course will explore the core concepts of risk and resilience from the perspective of multiple disciplines (e.g. anthropology, epidemiology, and more), delving into each construct’s underlying conceptual frameworks, methods of assessment, contributing factors on multiple levels, and evidence-based interventions to support resilience and mitigate risk. Students will then use these core concepts to reflect on meaningful engagement with marginalized populations when assessing and addressing risk and resilience, explore the meaning and consequence of categorizing people based on their risk behavior, and become familiar with cross cultural perspectives on these topics. The course will conclude with a deliberation of future directions risk and resilience examined through a public health equity lens. Students are expected to actively engage with assigned readings and in-class discussions, and will have the opportunity to pursue topics of interest through individual assignments. This is a Gordis Teaching Fellowship course open to juniors and seniors. Priority registration will be given to Public Health Studies majors; other students will be permitted as space allows.
AS.280.101 AND AS.280.240

AS.280.465. Beyond the Peer-Reviewed Article: Embodying Public Health Data for Human Consumption. 3 Credits.
As public health researchers and practitioners, one of the most important and in-demand skills is the ability to communicate data to effect population-level change. This course will explore concepts and case studies in data visualization, ethical data dissemination, and evidence-based advocacy. This course will cover strategies for presenting data that are approachable for lay audiences. Students will gain familiarity with key tools, media, and software to support data visualization and dissemination through lectures, case studies and course assignments. The course will culminate with an applied assignment which calls upon students to collaborate with Bloomberg School of Public Health faculty to utilize data from current research to effectively communicate key messages to non-specialist audiences. This is a Gordis Teaching Fellowship course open to juniors and seniors. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.466. Rethinking Prevention: Emerging and Novel Approaches to Addressing Adolescent Drug Use. 3 Credits.
Students in this upper-level course will be introduced to the unique needs and public health considerations when working with adolescent populations, specifically in preventing substance use and substance use disorders. Students will explore the etiology and epidemiology of substance use and substance use disorders in young people, as well as the history of substance use prevention while tackling topics of racism, stigma and oppression of those who use drugs. Progressing through the course, students will be introduced to novel and emerging ways the field is rethinking drug prevention, including the use of social media platforms, mindfulness in schools and phone apps. New tools for epidemiologic surveillance of populations will also be considered, such as machine learning and ecological momentary assessment. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.101;AS.280.355 OR AS.230.341

AS.280.467. Adverse Childhood Experiences: A Public Health Perspective. 3 Credits.
This seminar explores the scientific evidence underlying the impact of Adverse Childhood Experiences (ACEs) on various health outcomes. It first describes the prevalence of ACEs, which include abuse, neglect, and household challenges such as parental substance abuse, mental illness, separation or divorce, and incarceration. The course will then discuss mechanisms and risk and protective factors of negative health outcomes following ACE exposure across levels of a sociocological model. These discussions will directly inform the next part of the seminar, which presents evidence-based interventions for ACEs. Throughout the seminar, students will be active participants and will have the opportunity to explore their topics of interest. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.240

AS.280.468. Food Security in America. 3 Credits.
As of July 2021, 1 in 6 households reported experiencing food insecurity in the United States, with Black, Indigenous, and People of Color (BIPOC) populations disproportionally affected. Food insecurity has been a public health issue in America for decades, with COVID-19 exacerbating existing hardships and disparities resulting from inequitable policies and distribution of resources in communities. This course seeks to provide a critical understanding of the issue of food insecurity in America through describing and evaluating the existing policies, programs, and practices in the United States that aim to promote food security. This is a Gordis Teaching Fellowship course open to juniors and seniors. Priority registration will be given to Public Health Studies majors; other students will be permitted as space allows.
AS.280.101 AND AS.280.340
AS.280.469. How Inequity Persists in Statistics: Lessons Learned and Future Challenges. 3 Credits.
The course will examine the past, present, and future of statistics' impact on equity. We will discuss how early statistical thinking was used to defend racist narratives and how inequity persists in statistics to this day. We will explore current and future challenges using examples from artificial intelligence. Students will learn how to implement common artificial intelligence methods and communicate their results. This is a Gordis Teaching Fellowship course open to juniors and seniors. Priority registration will be given to Public Health Studies majors; other students will be permitted as space allows.

AS.280.495. Honors In Public Health - Seminar. 3 Credits.
Using lectures, oral presentations, and writing assignments, this seminar is designed to assist Public Health Studies majors in writing a senior thesis. Students will formulate their topics, develop research skills, and address issues of professional ethics. Participating in this seminar is required for students pursuing honors in Public Health Studies. Permission Required. Classes will be held at Bloomberg School of Public Health.
Area: Writing Intensive

AS.280.499. Honors in Public Health. 3 Credits.
A research methods seminar to prepare students doing honors in Public Health Studies. Permission Required.
Area: Writing Intensive

Perm. Req'd, Public Health Majors Only. This is a supervised, hands-on experience working with public health professionals. Students will complete 80 hours of applied work and will submit a synthesizing assignment at the end of the term. Students completing their AE in the current semester will be enrolled in Section 2. Students whose time will roll over to an additional grading period will be enrolled in Section 1. Please contact your PHS Advisor for complete details. You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.501. Internship-Public Health. 1 Credit.
Permission Required. Public Health majors only. You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.502. Internship-Public Health. 1 Credit.

AS.280.505. Research in Public Health. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.506. Research in Public Health. 1 - 3 Credits.
Permission Required. You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.511. Research for Juniors/Seniors in Public Health. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.512. Research for Juniors/Seniors in Public Health. 0 - 3 Credits.
Restricted to public health studies majors. Consult the public health studies adviser for procedure. Permission Required. You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.590. Internship - Summer. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.595. Special Studies in Public Health. 1 Credit.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.597. Research in Public Health. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.
