Master of Applied Science in Community-Based Primary Health Care Programs in Global Health, MAS

Program Overview

Please note: The Master of Applied Science (MAS) program in Community-based Primary Health Care Programs in Global Health is not open to new matriculants in AY23-24. Students previously admitted to the program should consult the prior catalogue/guidebook under which they were admitted or review the OPAL Student Resources site in CoursePlus. For additional information, please follow up directly with OPAL Office to verify program requirements; OPAL-Office@jhu.edu.

The Master of Applied Science (MAS) is a fully online, part-time degree designed for working professionals, delivered through the Online Programs for Applied Learning (OPAL). Programs focus on emergent industry sectors in public health and health care that have a need for highly skilled professionals. By building on the strengths of the School, they provide unmatched opportunities for advanced training and focus on both local and global health issues. Students are prepared to create innovative solutions through multidisciplinary approaches that apply the latest scientific knowledge. All MAS programs will culminate in a final Integrative Activity. The goal of this activity is for students to synthesize knowledge and skills obtained through coursework in a final project that demonstrates mastery of program competencies, as applied to real-world public health and health care questions. Students can complete their degree program in as little as two years, but are allowed up to four years.

The MAS program in Community-based Primary Health Care builds on the community health strengths of the Bloomberg School and the Department of International Health, which provides unmatched opportunities for advanced training, focuses on both local and global issues, and prepares students to address public health problems through multidisciplinary approaches that apply the latest scientific knowledge. The program will provide students with the skills to plan, implement, and evaluate community-based public health programs and services in countries throughout the world. Our focus on Primary Health Care is in keeping with the Alma Ata Declaration that is built on active community participation. We hope that as a result of this course students will be able to involve the communities where they work in being active partners in the provision of their own health care.

LinkedIn Group

We have established a LinkedIn group for each of the OPAL program areas in order to strengthen connections between current students, faculty, and alumni of OPAL programs, as well as to facilitate student-to-student peer networking.

Participation is voluntary, but we encourage students to join this professional networking community.

Additional Public Health Learning Resources

The Mid-Atlantic Regional Public Health Training Center provides links to many of its online learning resources, as well as external resources, databases and public health organizations. These can be used to supplement learning on a particular topic, or provide background material. Many of these resources are available for free via their website (https://www.jhsph.edu/research/centers-and-institutes/mid-atlantic-public-health-training-center/training_events/online_training.html).

The Welch Medical Library at Johns Hopkins has many resources related to research, writing and documentation on their YouTube channel (https://www.youtube.com/c/WelchMedicalLibrary/).

The School has a number of research and practice related seminar series (https://publichealth.jhu.edu/academics/lecture-series/) that occur throughout the year and contribute to the intellectual community of the School, for students, staff, and faculty. The Bloomberg School has a website (https://publichealth.jhu.edu/practice/resources-for-practitioners/) that provides some additional resources for practitioners as well.

Practitioners can also access dozens of courses from Bloomberg School faculty on Coursera (https://www.coursera.org/jhu/). Practice-focused offerings include courses on topics such as gun violence, food systems, health equity, biostatistics, and epidemiology, among others.

MAS in Community-based Primary Health Care Programs in Global Health Contact Information

MAS Program Adviser
William Brieger, DrPH
Professor and Program Director, MAS and Certificate programs in Global Health
Email: wbrieger1@jhu.edu

For Program-wide Issues
Elizabeth F. Topper, PhD, MEd, MPH
Senior Lecturer and Director, Online Programs for Applied Learning (OPAL)
Email: etopper@jhu.edu

Program Requirements

Course location and modality is found on the BSPH website (https://www.jhsph.edu/courses/).

Please note: The Master of Applied Science (MAS) program in Community-based Primary Health Care Programs in Global Health is not open to new matriculants in AY23-24. Students previously admitted to the program should consult the prior catalogue/guidebook under which they were admitted or review the OPAL Student Resources site in CoursePlus. For additional information, please follow up directly with OPAL Office to verify program requirements; OPAL-Office@jhu.edu.

Master of Applied Science in Community-based Primary Health Care Programs in Global Health is an interdisciplinary online degree. Faculty at the Bloomberg School of Public Health contribute to the program via course development, teaching, and advising students. The topics and concepts allow graduates to build a diverse skill set focusing on the design, analysis, implementation and evaluation of large-scale community-based primary health care programs.

Students will complete 50.5 credits to graduate. The program is designed to be completed in 8 academic terms - two academic years (Sept-May).
In addition to the coursework, students must complete an Integrative Activity, where newly acquired knowledge and skills are used to create an applicable activity (e.g., identifying a problem in community-based primary health care and designing a solution, plan for implementation and evaluation method) – with a final paper that describes the methodology used and the final assessment. Students can complete their degree program in as little as two years, but are allowed up to four years.

If the 2-credit Professional Development Workshop courses are not included in the required curriculum, students are still welcome to take them, in addition to the required degree courses outlined below. Current offerings include Effective Online Searching and Writing for Results. OPAL scholarship funds will apply towards these credits. Students should refer to the online course directory (https://www.jhsph.edu/courses/) for additional details.

**Satisfactory Academic Progress (SAP)**

The Bloomberg School of Public Health requires students to maintain satisfactory academic progress for the duration of the degree program. For the MAS program, satisfactory academic progress is defined as follows:

Maintaining a minimum cumulative grade point average of 2.75 and grades of C or better in all required courses. Grades of P are sufficient in courses that are graded as Pass/Fail. Students falling below this minimum should consult with the OPAL Program Office and their Academic Adviser in order to develop a course plan to allow them to raise the GPA above 2.75 as soon as possible, in order to return to good academic standing.

Failure to maintain satisfactory academic progress as defined by any of the criteria above may be grounds for dismissal from the program, and financial aid status will be affected. Full details of the School's Satisfactory Academic Policy can be found here (https://publichealth.jhu.edu/offices-and-services/office-of-student-affairs/financial-aid/federal-aid-policies/).

**Program Plan of Study**

Students should follow the plan outlined below if they wish to complete the MAS program in two years. This plan will also allow students to maintain minimum credits needed for financial aid eligibility each term, and to follow any prerequisite sequencing. Courses can be taken at a slower pace if needed, so long as course prerequisites are met.

**Integrative Activity**

**Online Programs for Applied Learning (OPAL) Integrative Activity: Human Subjects Research and Other Activities**

This culminating experience will provide Master of Applied Science students with the opportunity to synthesize lessons learned via the application of concepts and techniques. Please note that individual degree programs may have specific guidelines related to their particular Integrative Activity course including, but not limited to the format, presentation, and composition of final course deliverable.

As you begin planning the research for your Integrative Activity within the MAS program, please review the information below and proceed...
accordingly. Regardless of whether IRB review is required, all OPAL
students should apply ethical principles in their interactions with humans
and/or their data. Please follow the BSPH Ethical Code for Student
Activities that Involve Human Interactions.

1. As long as the project is limited to the context of the course, or
courses if components of the Integrative Activity is spread among
more than one course, there is no need for IRB approval, even if the
project involves human subjects research. These types of student
projects are considered learning exercises when there is no plan to
disseminate beyond the class, School, or affiliated agency.

2. If you do wish to publish your project while you are a student, you will
need to test to see if you are conducting Human Subjects Research
(HSR) which would necessitate IRB approval. You can test your
project for HSR by using the IRB worksheet or consulting the IRB
guidance flowchart. You will need to go to IRB for official/final
determination before beginning your research in order to be approved
for publication. All student-initiated research projects which you intend
to publish must have a preliminary review by the IRB Office
to determine whether they are human subjects research requiring
IRB oversight, unless (1) the student is working with a Principal
Investigator (PI) from another institution, or (2) the PI is adding you
as a student investigator to an existing, IRB-approved study. If you are
using human subjects data, you must obtain a determination from the
BSPH IRB. If you are collecting primary new data, complete the IRB
Office Determination Request Form for Primary Data Collection or if
you are using existing data, complete the IRB Office Determination
Request Form for Secondary Data Analysis in collaboration with
your adviser and submit it to the BSPH IRB Office e-mail address
jhsph.irboffice@jhu.edu. Be sure to include your adviser in your e-mail
submission.

3. If you do not intend to publish the project while you are a student,
IRB approval will not be required. However, if you would be interested
in publishing it after graduating from JHU, you should note that the
project must meet the ethical standards of your institution and that
many institutions will not allow you to present/publish human subjects
research without having prior IRB approval. For this reason, we strongly
recommend that you consult your organization now if you think that
you may wish to publish in the future.

Program Policies

For a full list of program policies, please visit the OPAL page (https://
publichealth.jhu.edu/academics/academic-program-finder/applied-
learning-programs/) where students can find our handbook.

PROGRAM COMPETENCIES

Please note: The Master of Applied Science (MAS) program in
Community-based Primary Health Care Programs in Global Health is not
open to new applicants in AY23-24. Students previously admitted to the
program should consult the prior catalogue/guidebook under which they
were admitted or review the OPAL Student Resources site in CoursePlus.
For additional information, please follow up directly with OPAL Office to
verify program requirements; OPAL-Office@jhu.edu.

The Master of Applied Science in Community-based Primary Health Care
Programs in Global Health is an interdisciplinary program. Faculty at the
Bloomberg School of Public Health contribute to the program via course
development, teaching, and advising students. The topics and concepts
allow graduates to build a diverse skill set focusing on the design,
analysis, implementation and evaluation of large-scale community-based
primary health care programs.

According to the requirements of the Council on Education for Public
Health (CEPH), all BSPH degree students must be grounded in
foundational public health knowledge. Please view the list of specific
CEPH requirements by degree type (https://e-catalogue.jhu.edu/public-
health/ceph-requirements/).

By the end of the program, students should be able to:

A. Core Global Health Practice Competencies

1. Apply capacity building processes to global health programming in
low and middle-income countries.
2. Identify and collaborate with a wide range of stakeholders whose
active participation is required for successful global health
programming at community, sub-national, national and regional
levels.
3. Apply ethical reasoning to the policy and programming decisions
needed for designing and implementing global health programs in low
and middle-income countries.
4. Exhibit a health equity and social justice lens in the design and
conduct of global health programs.
5. Apply appropriate management processes in the design,
implementation and evaluation of global health programs.
6. Demonstrate social, cultural and political awareness of the context in
which global health programming takes place.
7. Conduct strategic analysis of factors that influence the success of
global health programming.

B. Community-Based Primary Health Care Competencies

1. Use community-based approaches to address priority health
problems through full participation of community members and
groups
2. Design and manage implementation of household surveys that yield
relevant health and social data needed to plan community-based PHC
programs
3. Analyze local contexts and project implementation designs in
order to develop evaluation plans that can be practically applied to
community-based PHC programs in middle and low-resource settings
4. Design a community-based primary health care program from the
analysis through implementation to evaluation stages
5. Prepare a training plan for front-line and community health workers
involved in community-based PHC
6. Conduct a detailed analysis of the demographic, epidemiological
and social aspects of a major health need in a low- or middle-income
country.
